

The biggest innovations are the simplest ones

A Vital Innovation for Fertility Patients

Up to 50% of infertility cases are linked to poor sperm health. ZyMöt sperm separation devices are an innovative, natural, simple way to isolate the healthiest, best-performing sperm with the lowest possible DNA fragmentation.

Outcomes that matter

Recent data suggests that high DNA fragmentation in sperm is linked to poor fertility outcomes.

Men with normal semen analysis parameters may still have increased DNA fragmentation.

ZyMöt devices select sperm with the lowest DNA fragmentation in the sample, which may result in increased ongoing pregnancies and decreased miscarriages.

A game changer for your lab

Streamline your sperm preps with 50% fewer steps compared to other common methods.

Reduce hands-on time for sperm preparation, increasing productivity and decreasing the risk of error.

Consistently retrieve the best sample regardless of tech experience.

Easy to implement into any lab protocol with no additional equipment needed.
